VOLUNTARY ANNOUNCEMENT LATEST BUSINESS DEVELOPMENTS

This announcement is made by Unisound AI Technology Co., Ltd. (the “**Company**”) on a voluntary basis to inform the shareholders and potential investors of the Company of its latest business developments.

Recently, leveraging its solid accumulation of U2 large model technology, mature intelligent agent development platform, and profound understanding of trusted data preparation and the application of large model technology to support one-person company (“**OPC**”) operations, the Company successfully won the bid for the Model-Digital Space project funded and constructed by a Nanning municipal-level platform company, which precisely implements the national strategies of “digital economy development” and “market-based allocation of data elements”, helps Guangxi build the “China-ASEAN Digital Economy Cooperation Demonstration Zone”, and injects AI momentum into the development of the New Western Land-Sea Corridor.

The successful implementation of the Nanning project marked a critical leap for the Company’s city-level MaaS solution from “single-point breakthrough” to “regional replication”, and subsequently, the Company secured the Xiamen municipal-level AI public platform project. The total contract value for these two major municipal-level benchmark projects exceeded RMB20 million. The successful implementation of such projects demonstrates that the Company’s regional MaaS business model has been validated for cross-regional replication, laying a solid foundation for the rapid and large-scale implementation of this business model in the future.

Going forward, the Company will combine its advantages in U2 large model technology and its mature intelligent agent development platform to continuously refine the Model-Digital Space, city-level AI public foundation, and other application solutions with local owners and partners, empowering the development of local OPCs with its core AI technology and continuing to lead in the commercialization of large models.
